Common Questions Addressed in the Earthship Sats Paper Answer Booklet

Below are some typical questions and summarized model answers, illustrating the depth and clarity provided:

What are the main features of an Earthship?

Model Answer:

An Earthship is a self-sufficient, environmentally friendly building designed to minimize reliance on external utility systems. Its main features include:

- Thermal Mass Walls: Constructed using recycled tires filled with earth, which store heat during the day and release it at night.
- Passive Solar Design: Large south-facing windows (in the northern hemisphere) capture sunlight to warm the interior.
- Water Harvesting System: Rainwater is collected from the roof and stored in cisterns, with greywater recycled for plant irrigation.
- Renewable Energy Systems: Solar panels and wind turbines generate electricity off-grid.
- Recycled Materials: Use of bottles, cans, and tires reduces waste and costs.
- Natural Ventilation and Insulation: Proper design ensures airflow and thermal comfort year-round.

How does thermal mass improve energy efficiency?

Model Answer:

Thermal mass materials like earth-filled tires absorb heat during the day, reducing indoor temperature fluctuations. At night, they release stored heat, maintaining a stable and comfortable indoor environment. This passive regulation reduces the need for active heating or cooling systems, thereby conserving energy and lowering utility costs.

Describe the water harvesting process in an Earthship.

Model Answer:

Rainwater is collected from the roof surface through gutters and directed into storage cisterns. The water then passes through filters to remove debris and contaminants. It is used for indoor needs such as washing and cooking. Greywater from sinks and showers is diverted to planted areas or greywater recycling systems, where it is treated naturally before being reused for irrigation, completing a sustainable cycle.
