Question What are the important inter formulae for EAMCET Mathematics? Key inter formulae include the distance formula, section formula, midpoint formula, area of triangle, Heron's formula, and the formula for coordinate geometry conversions. These are essential for solving problems involving points, lines, and shapes in the exam. How is the distance between two points calculated in EAMCET inter formulae? The distance between points (x_1, y_1) and (x_2, y_2) is given by $\sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$. What is the formula for finding the midpoint between two points in EAMCET geometry? Midpoint M between (x_1, y_1) and (x_2, y_2) is given by $M = ((x_1 + x_2)/2, (y_1 + y_2)/2)$.

Which inter formulae are useful for calculating the area of a triangle in EAMCET? The main formulae include Heron's formula, $(1/2) \times \text{base} \times \text{height}$, and coordinate geometry formulas involving the determinant method: $\text{Area} = (1/2)|x_1(y_2 - y_3) + x_2(y_3 - y_1) + x_3(y_1 - y_2)|$. How do you find the ratio in which a point divides a line segment in EAMCET inter formulae? Using the section formula: If a point divides the segment joining (x_1, y_1) and (x_2, y_2) in ratio $m:n$, then the point's coordinates are $((mx_2 + nx_1)/(m + n), (my_2 + ny_1)/(m + n))$. What is the significance of the slope formula in EAMCET inter coordinate geometry? The slope formula ($m = (y_2 - y_1)/(x_2 - x_1)$) helps determine the inclination of a line, check for perpendicularity or parallelism, and is essential for solving problems involving lines and their equations. Are there any shortcut methods for calculating areas in EAMCET using coordinate formulae? Yes, the determinant method simplifies area calculation by directly applying the coordinates of vertices, making it faster and reducing errors in the exam. How can understanding inter formulae improve problem-solving speed in EAMCET? Mastering inter formulae allows quick calculation of distances, midpoints, areas, and ratios, enabling efficient solving of geometry problems without lengthy calculations during the exam.
