Tip: Always perform inverse operations, and check your solution by substituting back into the original equation.

Geometry: Calculating the Area of a Triangle

Question: A triangle has a base of 8 cm and a height of 5 cm. What is its area?

Solution:

- Use the formula: $\text{Area} = \frac{1}{2} \times \text{base} \times \text{height}$
- Calculation: $\frac{1}{2} \times 8 \times 5 = 20 \text{ cm}^2$

Tip: Always identify the correct formula and ensure measurements are in the same units.

Data Handling: Interpreting a Bar Chart

Question: The bar chart shows the number of books read by students in a month. If the bar for Student A reaches 12 units and each unit represents 2 books, how many books did Student A read?

Solution:

- Total books read = $12 \text{ units} \times 2 \text{ books/unit} = 24 \text{ books}$

Tip: Pay close attention to the scale and units used in graphs.
