Understanding the Tin Type Photography Technique

Historical Background and Significance

Tin type photography, also known as wet plate collodion process, originated in the 1850s and became a popular method for portraiture and landscape photography well into the late 19th century. The process involved coating a thin sheet of iron (tinned with a layer of tin) with a collodion emulsion, then exposing it while still wet. The resulting images were sharp, detailed, and durable traits that contributed to its widespread use during that era.

The popularity of tin types was driven by several factors:

- Cost-effectiveness compared to daguerreotypes.
- The relative speed of exposure and development.
- The ability to produce multiple copies from a single negative.
