- Specific guidance on alternative correct responses

Structure of the Mark Scheme

Understanding the layout of the mark scheme is crucial for effective interpretation. The June 2013 OCR C1 mark scheme is organized systematically as follows:

1. Question-by-Question Breakdown

- Each question is numbered sequentially.
- Sub-questions are labeled (a), (b), (c), etc.
- For each sub-question, the scheme details the maximum marks available.

2. Marking Points and Criteria

- Marking points are explicitly listed.
- Each point corresponds to an element of the correct answer.
- Marks are awarded based on the accuracy and completeness of these points.

3. Levels of Response (if applicable)

- For some questions, especially those requiring explanations, a level-based marking approach may be used.
- Each level corresponds to the quality and depth of the response.

4. Notes and Clarifications

- The scheme includes notes on common errors.
- Clarifications help examiners distinguish between correct and partially correct responses.

Key Components of the Mark Scheme

To fully appreciate the mark scheme's depth, it's important to analyze its core components:

1. Explicit Marking Points

The scheme meticulously lists what constitutes a correct answer. For example:

- When asked to explain atomic number, the scheme expects mention of the number of protons.
- For bonding questions, the presence of shared electron pairs, electrostatic attraction, or the type of bond (ionic, covalent, metallic) are key.

2. Partial and Full Marks

- Partial marks are awarded for correct but incomplete responses.
- Full marks are given when all criteria are met.
- The scheme often specifies what partial responses are acceptable, e.g., 'if the candidate mentions 'protons' but omits 'electrons,' award partial credit.'

3. Alternative Correct Answers

Recognizing multiple valid responses is vital:

- For numerical questions, different units or notation might be acceptable.
- For conceptual questions, synonyms or different phrasing might be considered correct.

4. Common Misconceptions and Errors

- The scheme anticipates typical mistakes, such as confusing isotopes with ions.
- It provides guidance on whether such errors merit marks, often awarding partial credit where appropriate.

Question-Specific Analysis

A significant part of understanding the June 2013 C1 mark scheme involves examining specific questions to see how marks are allocated and what responses are expected.

Sample Question 1: Atomic Structure

- Question: "State the relative charge and relative mass of a proton."
- Mark scheme expectations:
- Charge: +1
- Relative mass: 1
- Marking points: Full marks awarded for both correct responses; partial for only one.

Sample Question 2: Electron Arrangement

- Question: "Describe how electrons are arranged in a sodium atom."
- Mark scheme expectations:
- 2 electrons in the first shell
- 8 electrons in the second shell
- 1 electron in the outer shell
- Additional notes: A correct electron configuration (e.g., 2.8.1) earns full marks.

Sample Question 3: Bonding and Structure

- Question: "Explain why sodium chloride forms a crystalline structure."
- Mark scheme points:
- Electrostatic attraction between Na^+ and Cl^- ions
- Regular repeating lattice structure
- Strong ionic bonds leading to high melting point
- Awarding marks: Full marks for detailed explanation; partial for mentioning just electrostatic attraction.

Marking of Calculations and Numerical Questions

Calculations are a prominent part of C1 questions. The mark scheme provides detailed guidance on how to award marks:

- Step-by-step marking: Each calculation step is evaluated individually.
- Significant figures: Proper use of significant figures is required.
- Unit consistency: Correct units must be used; otherwise, marks may be lost.
- Common pitfalls: Incorrect use of molar masses or rounding errors are highlighted, with guidance on partial credit.

Example: For a question calculating Mr (molecular mass), if a candidate correctly sums atomic masses but makes a rounding error, partial marks are awarded based on the correctness of the calculation.
