Storms and Hurricanes

Storms are powerful weather events characterized by strong winds and heavy rain. Hurricanes, also known as cyclones or typhoons, are massive storms that form over warm ocean waters. They can cause significant damage when they reach land, bringing flooding, high winds, and storm surges. The Weatherpedia TH explains how warm ocean water fuels hurricanes and how scientists track these storms using satellites and weather balloons.

Thunderstorms and Tornadoes

- **Climate:** The average weather patterns in a region over a long period, typically 30 years or more.

This distinction helps children understand how local weather can change daily, while climate reflects broader patterns over decades.
